

Introduction:

Stainless Steel panel water tank is assembled by Stainless steel molding panels and accessories. According the connected type , there are bolted and welded water tank. The panel size are 1000*1000mm, 1000*500mm,500*500mm. The water tank volumn is from 0.125-1200CBM.

3.Beautiful Appearance Fluent line , perfect design , the whole body is just a piece of art and pleasing to eyes .

4.Characteristic The SS assembly water tank can the withstand high temperature, never rusting, non-light,beautiful appearance, and closed type can easy to avoid water polluted again.

5. Under the normally temperature , stainless steel can be used in the CL-

Material	Application scope in CL-
SS304	≧ 25ppm
SS316	≧ 50ppm
SS444	≧ 250ppm

Internal structure:

Advantage:

1. Resistant to rust Made of high quantity food grade stainless steel panel (SS 304) , completely block the sunlight , do not be algae , at any time to keep the water clean .
- 2.Light weight , Low price Dongding special plate type , complicated stamping forming technology , with minimal material consumption to achieve high strength requirement , weight is only a third of the water tank made of ordinary steel plate .

Application :

Building area, roof tank, pure water, beverage, brewing, food, medicine and all kinds of places where containers are needed
